

UNAIDS and the Global Fund to Fight AIDS, Tuberculosis and Malaria: in partnership to end the AIDS epidemic by 2030

UNAIDS and the Global Fund to Fight AIDS, Tuberculosis and Malaria (Global Fund) continue their unique partnership that is paving the way to end the AIDS epidemic as a global public health threat. UNAIDS supports countries at all stages of the Global Fund grant cycle—from the collection and analysis of

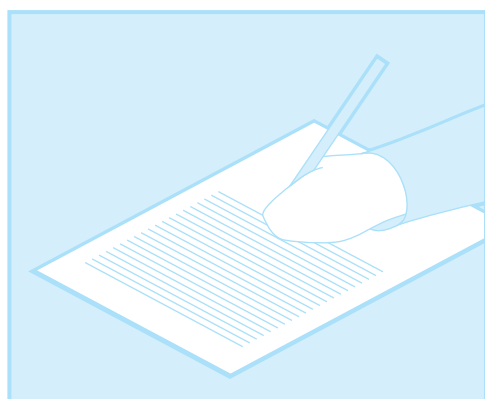

epidemiological data and strategic information convening country dialogues of stakeholders; to the development of strong HIV investment cases, national strategic plans and funding requests; to grant negotiations, programme implementation, and monitoring and evaluation.

UNAIDS support to countries and regions in 2014

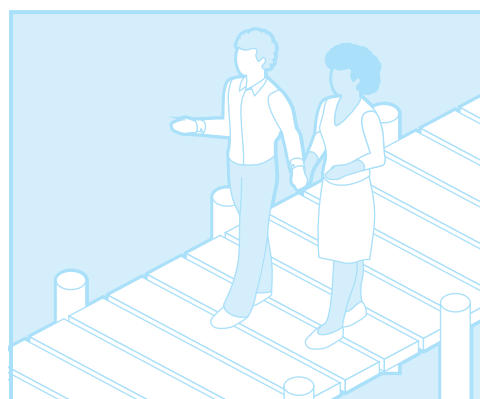

BUILDING STRONG HIV INVESTMENT CASES AND NATIONAL STRATEGIC PLANS

UNAIDS and its Technical Support Facilities supported 21 countries to develop HIV investment cases that became the building blocks of their Global Fund concept notes. A total of 26 countries reviewed or developed robust national HIV strategic plans with the support of UNAIDS.

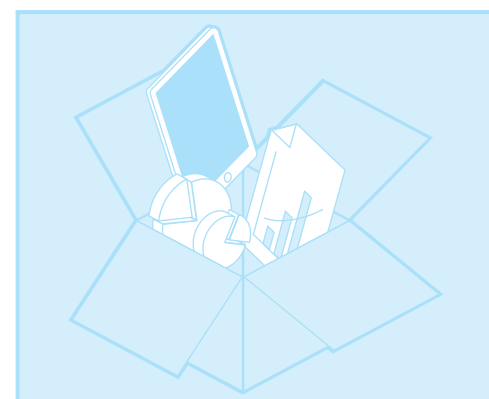

DEVELOPING GLOBAL FUND CONCEPT NOTES

With support from UNAIDS, 43 countries submitted Global Fund concept notes for a total allocation of US \$4.3 billion, 22 of which are joint HIV/tuberculosis concept notes.

INCLUSIVE COUNTRY AND REGIONAL DIALOGUES

UNAIDS used its role as a convener to bring partners together for inclusive country and regional dialogues in all regions, with a special emphasis on empowering civil society and key populations for meaningful participation.

IMPROVED CAPACITY FOR GLOBAL FUND GRANT SUPPORT

UNAIDS and its Technical Support Facilities trained over 300 technical support providers and national partners on the new funding model and related processes. UNAIDS continues to support grant making and grant implementation, through the efforts of the United Nations Joint Team on AIDS and in close coordination with CCMs and in-country stakeholders.
